Project: The Rise of Togg and Electric Mobility in Turkey

1. Detailed Story (Sunum Metni)

Introduction: "Hello everyone. Today, I'm going to share a story about a major transformation in Turkey. For many years, Turkey produced cars for global brands, but now we have our own: **Togg**. It stands for 'Türkiye'nin Otomobili Girişim Grubu.' This is not just a car; it is a symbol of a new era in Turkish technology."

The Production and Innovation: "The project officially started in 2018 with the cooperation of five major Turkish companies. The factory was built in **Gemlik, Bursa**, in a record time. What makes Togg special is its technology. The engineers call it a **'smart device'** because it is constantly connected to the internet. It has a huge digital dashboard that covers the entire front of the cabin. You can pay for coffee, find parking, or even control your smart home from the car."

Environmental Impact: "Climate change is a global problem, and Turkey is taking steps to solve it. Togg is **100% electric**, which means zero tailpipe emissions. To support this, a company called **Trugo** is building thousands of fast-charging stations all over Turkey. This encourages people to stop using petrol and start using clean energy."

Success on the Roads: "The first model, the **T10X**, became very popular quickly. In the first few months, tens of thousands of people applied to buy it. Now, you can see these cars in every city of Turkey. It is a source of pride for many citizens because it shows that Turkey can compete in the global high-tech market."

2. Deep Dive: Facts & Figures (Detaylı Bilgiler ve Rakamlar)

- **Range (Menzil):** The car offers two battery options. The long-range version can travel **523 kilometers** on a single charge.
- **Acceleration (Hızlanma):** It is very powerful. The dual-motor version goes from 0 to 100 km/h in just **4.8 seconds**.
- **Colors (Renkler):** The colors of the car are inspired by Turkey's beauty. For example, **'Gemlik Blue'** represents the sea, and **'Cappadocia'** represents the famous fairy chimneys.

3. Class Discussion / Q&A (Sınıf İçi Tartışma Soruları)

1. **Do you think electric cars are the only solution for pollution?** (Sizce kirlilik için tek çözüm elektrikli arabalar mı?)
2. **Would you prefer a Togg or a Tesla? Why?** (Togg mu Tesla mı tercih edersiniz? Neden?)
3. **Is Turkey ready for a full electric transition?** (Türkiye tamamen elektrikli araçlara geçmeye hazır mı?)
